

Combining two class:

```
function FailMessage()
{
  return(
    <div>
      <h1 style={
        {
          textAlign: 'center',
          color:'green'
        }
      }>Congratulation !!! you are Fail the test.<br /></h1>
    </div>
  )
}
export default FailMessage
function PassMessage()
{
  return(
    <div>
      <h1 style={
        {
          textAlign: 'center',
          color:'green'
        }
      }>Congratulation !!! you are pass the test.<br /></h1>
    </div>
  )
}
export default PassMessage
```

```
import React from 'react';
import PassMessage from './PassMessage';
import FailMessage from './FailMessage';
class App extends React.Component{
  render()
  {
    return(
      <div>
        <PassMessage/>
        <FailMessage/>
      </div>
    );
  }
}
export default App;
```
